

REACT-REDUX

1. Cài đặt react-redux

```
npm install react-redux --save
```

2. Tạo store

```
var reducer = (state = defaultState, action) => {  
  switch (action.type) {  
    case 'DELETE_NOTE':  
      return {...state, mang: state.mang.filter((e, i) => i !== action.index)}  
    case 'ADD_NOTE':  
      return {...state, mang: [...state.mang, action.note]}  
    default:  
      return state  
  }  
}  
  
var store = redux.createStore(reducer, redux.compose(  
  window.devToolsExtension? window.devToolsExtension(): f => f  
));
```

3. Provider

```
var {Provider} = require('react-redux');  
  
ReactDOM.render(  
  <Provider store={store}>  
    <List/>  
  </Provider>,  
  document.getElementById('root')  
);
```

4. Connect

```
var {connect} = require('react-redux');
```

```
module.exports = connect(  
  state => state  
) (List);
```

5. Dispatch

```
<button onClick={this.del}>Delete</button>
```

```
module.exports = connect() (Note);
```

```
del(){  
  const {dispatch, index} = this.props;  
  dispatch({type: 'DELETE_NOTE', index: index})  
},
```
